

PROTECTANT

778 RHINO PRO

Graphene Infused Ultimate Surface Protectant

What is 778 RhinoPro:

RhinoPro 77 Protectant uses the power of Graphene Oxide based to provide a coating that will provide a high level of protection for up to 12 months. With a continued focus on ceramic-based cleaners and coatings the car wash in graphene based products provide a high level of protection, so automobile enthusiasts have little choice but to take notice if they want to keep their cars looking sharp.

What benefits does 778 RhinoPro Provide:

The coating contains a black graphene oxide powder. This component enhances the surface underneath, rather than just adding a glossy layer on top. This means that while it will add gloss and depth to a glossy surface, it will not do so to a matte surface. Therefore, it can be used on matte surfaces without affecting the finish.

The product's thermal properties allow it to be applied in direct sunlight easily and without the worry of high spots, streaking, or a difficult buffing process.

These same thermal properties also help prevent hard water spots from occurring. The graphene layer absorbs the heat, keeping the paint underneath cool, helping to prevent the hard water spots from etching into the clear coat. If water spots do occur, they should easily be wiped off. It is safe and effective on various surfaces, including paint, glass, wheels, plastic, and metal.

Anti-corrosion: Due to the honeycomb like structure, Graphene is the most impermeable material ever found, this acts as a filter to humidity and salt, providing a protective barrier over the substrate, at higher levels than a non-Graphene coating.

Flexibility: Graphene is also the most flexible and pliable material in the world, which allows the coating to bend and mold to the substrate, instead of being rigid leading to cracking and failures.

Anti-Friction: Due to the thickness or lack there of, and how layers of Graphene stack and move against each other, we are able to experience less friction than traditional coatings.

Durability: The strongest material known even against UV, the make-up of Graphene binds with traditional coatings to enhance overall stability and durability the coating. Increasing life-span and reducing down-time and failures.

Physical Characteristics:

Color	Clear
Fragrance	Faint
Form	Liquid
Phosphates	None
FlashPoint	212F
pH	6-7
Specific Gravity	1.00
Viscosity	Thin
Foam	None
Biodegradable	100%
Reclaim Compatible	Yes
Shelf Life	1 Year

sds reference no. 4778

Available Packages	
4778-55	55 Gallon Plastic Drum
4778-30	30 Gallon Plastic Drum
4778-15	15 Gallon Plastic Drum
4778-5	5 Gallon Plastic Pail
4778-5.25	2 x 2.5 Gallon Container

Use Benefits:

- Reduces surface scratching
- Chemical resistant protection
- Lasts for months
- Super Hydrophobic.
- Helps prevent water spotting.
- Create a durable UV barrier and protectant.
- Boosts water beading and sheeting,
- Reduces paint and metal oxidation.
- Heat dissipation reduce the heat on the paint surface
- Vehicle surfaces stay cleaner longer.
